

# Named Entity Recognition

INTRODUCTION TO NATURAL LANGUAGE PROCESSING IN PYTHON

**Katharine Jarmul**  
Founder, kjamistan

# What is Named Entity Recognition?

- NLP task to identify important named entities in the text
  - People, places, organizations
  - Dates, states, works of art
  - ... and other categories!
- Can be used alongside topic identification
  - ... or on its own!
- Who? What? When? Where?

# Example of NER

In 1917, Einstein applied the general theory of relativity to model the large-scale structure of the universe. He was visiting the United States when Adolf Hitler came to power in 1933 and did not go back to Germany, where he had been a professor at the Berlin Academy of Sciences. He settled in the U.S., becoming an American citizen in 1940. On the eve of World War II, he endorsed a letter to President Franklin D. Roosevelt alerting him to the potential development of "extremely powerful bombs of a new type" and recommending that the U.S. begin similar research. This eventually led to what would become the Manhattan Project. Einstein supported defending the Allied forces, but largely denounced using the new discovery of nuclear fission as a weapon. Later, with the British philosopher Bertrand Russell, Einstein signed the Russell-Einstein Manifesto, which highlighted the danger of nuclear weapons. Einstein was affiliated with the Institute for Advanced Study in Princeton, New Jersey, until his death in 1955.

# nlTK and the Stanford CoreNLP Library

- The Stanford CoreNLP library:
  - Integrated into Python via `nlTK`
  - Java based
  - Support for NER as well as coreference and dependency trees

# Using nltk for Named Entity Recognition

```
import nltk

sentence = '''In New York, I like to ride the Metro to
            visit MOMA and some restaurants rated
            well by Ruth Reichl.'''

tokenized_sent = nltk.word_tokenize(sentence)
tagged_sent = nltk.pos_tag(tokenized_sent)
tagged_sent[:3]
```

```
[('In', 'IN'), ('New', 'NNP'), ('York', 'NNP')]
```

```
print(nltk.ne_chunk(tagged_sent))
```

```
(S  
  In/IN  
  (GPE New/NNP York/NNP)  
  ,/,  
  I/PRP  
  like/VBP  
  to/TO  
  ride/VB  
  the/DT  
  (ORGANIZATION Metro/NNP)  
  to/TO  
  visit/VB  
  (ORGANIZATION MOMA/NNP)  
  and/CC  
  some/DT  
  restaurants/NNS

INTRODUCTION TO NATURAL LANGUAGE PROCESSING IN PYTHON

# Introduction to SpaCy

INTRODUCTION TO NATURAL LANGUAGE PROCESSING IN PYTHON

**Katharine Jarmul**  
Founder, kjamistan

# What is SpaCy?

- NLP library similar to `gensim`, with different implementations
- Focus on creating NLP pipelines to generate models and corpora
- Open-source, with extra libraries and tools
  - Displacy

# Displacy entity recognition visualizer

In New York GPE, I like to ride the Metro to visit MOMA ORG and some restaurants rated well by Ruth Reichl PERSON

(source: <https://demos.explosion.ai/displacy-ent/>)

```
import spacy
nlp = spacy.load('en')
nlp.entity
```

```
<spacy.pipeline.EntityRecognizer at 0x7f76b75e68b8>
```

```
doc = nlp("""Berlin is the capital of Germany;
            and the residence of Chancellor Angela Merkel.""")
doc.ents
```

```
(Berlin, Germany, Angela Merkel)
```

```
print(doc.ents[0], doc.ents[0].label_)
```

```
Berlin GPE
```

# Why use SpaCy for NER?

- Easy pipeline creation
- Different entity types compared to `nltk`
- Informal language corpora
  - Easily find entities in Tweets and chat messages
- Quickly growing!

INTRODUCTION TO NATURAL LANGUAGE PROCESSING IN PYTHON

# Multilingual NER with polyglot

INTRODUCTION TO NATURAL LANGUAGE PROCESSING IN PYTHON

**Katharine Jarmul**  
Founder, kjamistan

# What is polyglot?

- NLP library which uses word vectors
- Why `polyglot` ?
  - Vectors for many different languages
  - More than 130!
